Composite
Doors**

www.qcd.ie

Dear Customer,

We are proud to present the Palladio Door Collection. We think you will agree that it has been worth waiting for. It is by a long measure, in our opinion, the finest composite door on the market today. In ten years research and development we have left no stone unturned in our quest for the perfect product.

Our approach to this was innovative and radical. The composition of the door differs from all others in its MONOCOQUE structure. This structure gives it a massive strength-to weight ratio and is protected in Europe by patent number 1766176 (Patents in the USA and Canada pending). Apart from the monocoque design there are a lot of other innovative features to this door. For instance, we have designed and manufactured a hinge exclusively for this door, so it is visually concealed unlike the more commonly used flag hinge, which is unsightly. Our glazing system with beads that look like wood is also very attractive. As is evident from the following pages, our wood grain finish is superb, due to the fact that all our tooling is made in house. In a very unique process we replicate exactly the finish of a real oak door, 100% true to the original. Another feature of the door is its excellent U value rating of 0.205 as tested by the “Lambda” testing method.

In addition to this, all our glass is triple glazed and we use edgetech warm edge seals for the lowest U value possible of 0.7 . Combined with our new range of Patinated glass designs that consists of a sandblasted glass with a clear border that will give you modern and contemporary design. Our patinated design is achieved through sandblasting not by films or resins that is completely environmentally friendly that will last a lifetime.

We are dedicated to the pursuit of excellence and service to our loyal customers. We take this opportunity to thank you for your continued support. When we say the customer is king it is not an empty platitude, - we mean it!

Design your new Door, Go to www.palladiodoorcollection.com

Avant Garde Collection

Our new contemporary range of stylish doors are inspired by a demand for modern clean lines that reflect the aspirations of modern architectural homes.

When we set about the task of creating this new collection of doors, we had to be sure we never deviate from the high standard set by our existing Palladio range of doors and adhering to our core values, function and design.

Our new designs are inspired by the work produced by the “Bauhaus Movement” of the 1920’s and the work of Frank Lloyd Wright. We sincerely hope our new designs are sympathetic with the vision you have for your contemporary home.

We have an extensive selection of furniture for our doors in various colours, enabling you to customise your door.
Our designer handles add a stylish and contemporary look to our doors, ensuring customer satisfaction.

This 3D generated photo demonstrates the advantage of our unique hinge. As is evident from the above picture, this hinge is not attached to the outside of the door, and therefore enhances the appearance of the door, unlike a more conventional flag hinge - as seen on the left. Double seal and rebate

The Avant Garde Collection

Here on the left you see our superior MONOCOQUE structure and the advantage it holds over its competitors as demonstrated on the opposite page.

Ultra strong Durohalts composite structure

316 Marine grade stainless steel

56mm Triple glazed unit

Warm edge spacer

Renolit Foil Finish

Revolutionary high density PU core

On the right we have produced a cut through section of the Avant Garde door with the revolutionary high density PU core along with a 56mm triple glazed unit. We have created an ultra strong Durohalts composite structure laminated to a Renolit foil finish on the surface, giving you massive strength and security to your home

With Your Security And Safety In Mind

Fig. 1

Fig. 2

Above all we are a design and innovation led company and this will always shine through in the finished product. We start with the project design, then manufacture the machine we require and finally manufacture the product. Figure 1 shows the oak pattern from which the final mould will be produced.

The Picture above shows conventional composite doors, comprised of two 2mm skins bonded to a foam core.

To dispel any lingering doubt you may have, we have carried out our own rudimentary test using a 4x4 vehicle.

Figure 2 shows finished door from the original tooling.

Figure 3 is a good example of bad tooling design that lacks character.

On the other hand, compare this to Figure 4 which you can judge for yourself.
